

Greenmantle Gardens

... passionate by nature ...

The 10 Principles of Garden Design

In this presentation we shall explore together the inspirational world of garden design through the lense of the 10 principles designers use to inform themselves whilst producing quality and exciting work...

These are:

unity

balance

perspective

light and shade

colour

texture

habit and form

scale

time

space and mass

Based in the heart of Devon, Françoise Elvin of Greenmantle Gardens will demonstrate how these principles are used in design practice to produce stunning gardens.

The presentation relies on many photos taken by Françoise, her associates, and others, and show-cases the work of gardeners and designers at home and abroad in integrating these practices...

Discover how you could apply these principles to great effect in your own garden , learn how to appreciate the living environment in a new light...

The presentation lasts approximately an hour and a half with time for your questions at the end.
